

»»» iOS ««« CONCURRENCY WITH GCD & OPERATIONS

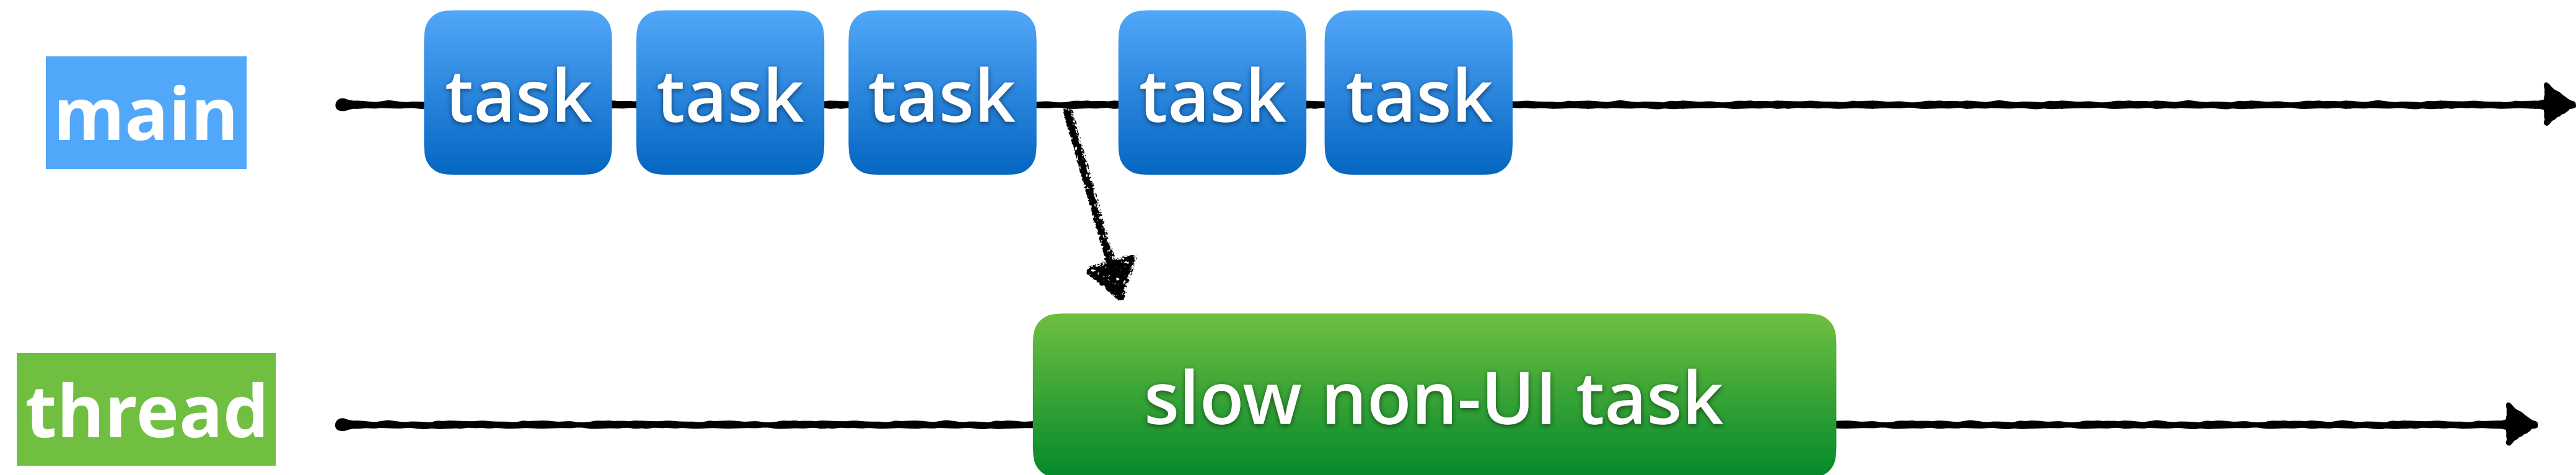

PART 2: TERMINOLOGY

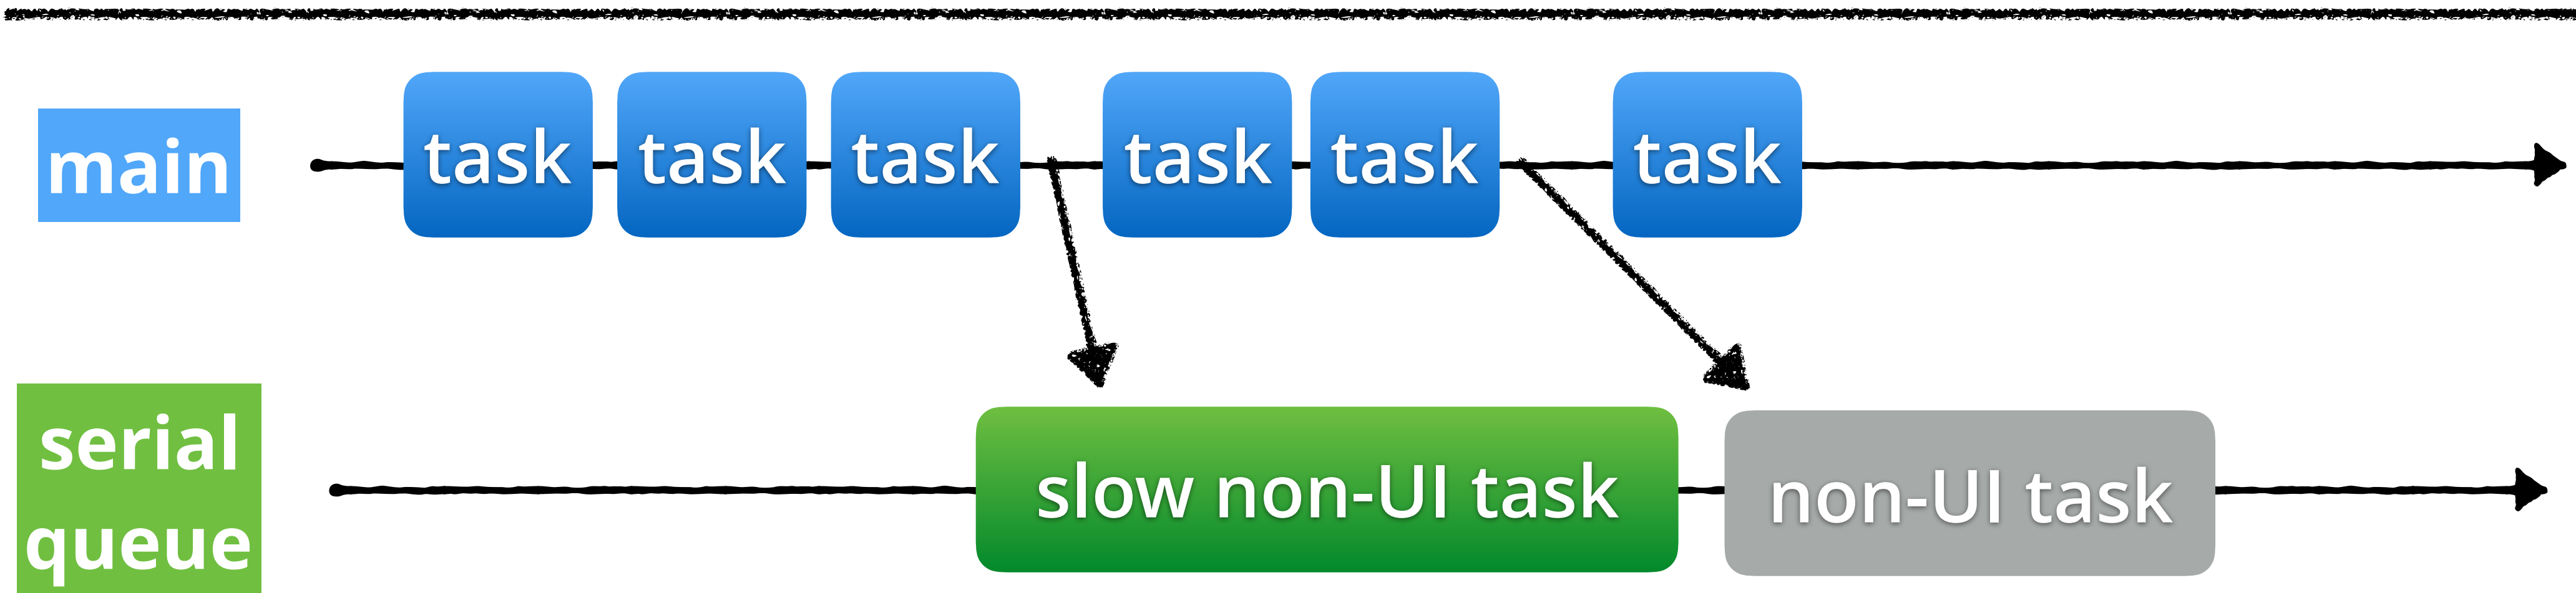

SYNCHRONOUS

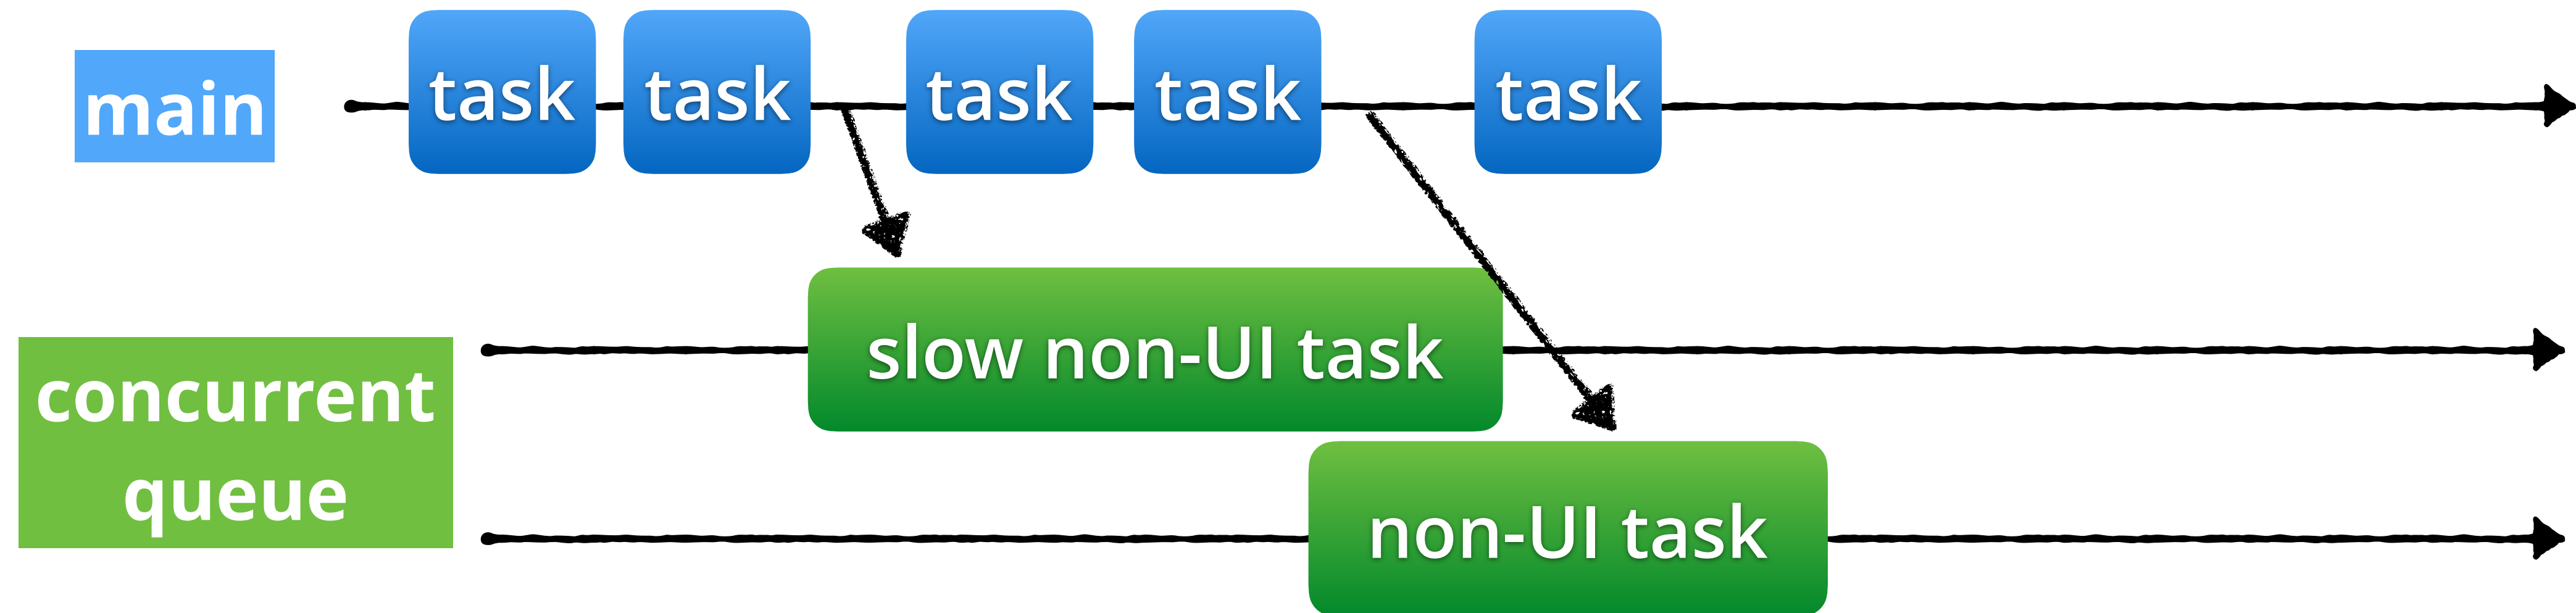

ASYNCHRONOUS

SERIAL QUEUE

CONCURRENT QUEUE

GCD QUEUES

```
let mainQ = DispatchQueue.main
```

```
let mySerialQ = DispatchQueue(label: "com.raywenderlich.serial")  
let workerQ = DispatchQueue(label: "com.raywenderlich.worker",  
    attributes: .concurrent)
```

```
DispatchQueue.global(qos: .userInteractive)  
DispatchQueue.global(qos: .userInitiated)  
DispatchQueue.global() // .default qos  
DispatchQueue.global(qos: .utility)  
DispatchQueue.global(qos: .background)  
DispatchQueue.global(qos: .unspecified)
```

DISPATCHING TASKS TO A QUEUE

```
DispatchQueue.global().async {  
    // do expensive synchronous task  
    DispatchQueue.main.async {  
        // update UI when task finishes  
    }  
}
```

```
private let internalQueue = DispatchQueue(label:  
    "com.raywenderlich.person.internal")  
var name: String {  
    get {  
        return internalQueue.sync { internalName }  
    }  
    set (newName) {  
        internalQueue.sync { internalName = newName }  
    }  
}
```

SYNC DISPATCHING DON'TS

```
// Never dispatch synchronously onto the current queue
// If currentQueue is the current queue, don't do this:
currentQueue.sync {
    task1()
}

// Never dispatch synchronously from the main queue
// If the current queue is the main queue, don't do this:
anyOtherQueue.sync {
    task2()
}
```

CHALLENGE TIME!

```
30 let inputImage = UIImage(named: "dark_road_small.jpg")
```

31

```
51 ts0p.outputImage
```
